Re Item V

**Reasoned statement with regard to novelty, inventive step or industrial applicability;
citations and explanations supporting such statement**

1 The following documents are referred to in this communication:

D1 : WO 99/61891

2 INDEPENDENT CLAIM 1

The present application does not meet the criteria of Article 33(1) PCT, because the subject-matter of claim 1 does not involve an inventive step in the sense of Article 33(3) PCT.

The document D1 is regarded as being the closest prior art to the subject-matter of claim 1, and shows (the references in parentheses applying to this document):

A fixed focus handy ovulation tester (10) comprising an inner casing and a fixed focus eye piece assembly (21) having a bottom inner portion for placing a biological specimen and a top outer portion for viewing the specimen being removably located at the top end of the inner casing (see D1, p.5; l.7 to l.27)

The subject-matter of claim 1 therefore differs from this known D1 in that the fixed focus eye piece assembly accommodates for dioptric variations up to +/- 4 diopters.

As a great number of users has a dioptric defect in their eyes, providing a fixed-focus device is merely one of several straightforward possibilities from which the skilled person would select, in accordance with circumstances, without the exercise of inventive skill, in order to solve the problem posed. The bi-convex lenses of D1 24,26 are prefocused to the sample receiving surface 29, and have a combined magnification of preferably 40x-100x (see D1 p.6, l.10 to l.24)

The same reasoning applies, mutatis mutandis, to the subject-matter of the corresponding independent claims 2-23, which therefore are also considered not inventive.
